

2025-26 PERFORMANCE REVIEW

Blinkit Performance Analysis

A data-driven diagnostic of operational health, customer behavior, and revenue opportunities — built to inform strategic decisions for senior product, operations, and strategy leaders.

Business Performance Dashboard

Key platform metrics across revenue, fulfillment, and customer engagement.

₹903K

Total Revenue

Gross sales after discounts

5K

Total Orders

Successfully placed on platform

₹180

Avg Order Value

Per transaction

13.5

Avg Delivery (min)

Minutes per order

3K

Registered Customers

1K repeat buyers

CRITICAL BOTTLENECK #1

41% of Orders Are Failing to Complete

Only **59% of orders succeed** — 20.48% are refunded and 20.04% are cancelled. Every 100 orders loses 41 to revenue leakage, reverse logistics costs, and eroded trust.

59% Success Rate

Orders completed without issue

20.48% Refunded

Post-delivery returns & reimbursements

20.04% Cancelled

Pre-delivery order cancellations

1 in 4 Orders Misses the 15-Minute Promise

At **24% late delivery rate**, nearly a quarter of orders exceed the 15-minute SLA — a critical failure in a market where Zepto and Instamart compete on speed.

Instant Churn Risk

Delayed customers switch apps on their next order

Brand Damage

Speed is Blinkit's core promise — delays break trust

Acquisition Is Healthy. Retention Is Not.

Of 3K registered users, only **1K are repeat buyers** — a 33% retention rate. Poor fulfillment (cancellations, delays) prevents first-time users from becoming loyal customers.

⚠️ **2,000 customers** have tried Blinkit once and have not returned — a dormant revenue pool requiring targeted re-engagement.

REVENUE OPPORTUNITY #1

Dairy, Bread & Eggs Drive the Highest Revenue Share

Daily-use essentials dominate the category mix — high-frequency items that keep users returning. **Household Essentials** add a second strong pillar, reinforcing Blinkit's role as a daily utility.

Dairy, Bread & Eggs

Largest revenue contributor — highest daily repeat intent

Household Essentials

Second-largest category — strong habitual purchase patterns

Strategic Leverage

Use these categories as anchors for cross-sell and bundle strategies

₹75K in Pure Delivery Revenue — Proof of Convenience Willingness

Customers are already paying **₹75K in delivery fees** — validating willingness to pay for speed during peak hours, bad weather, and high-demand windows.

Dynamic surge pricing and time-slot premiums can scale this into a predictable, high-margin revenue stream.

i **8.3%** of total revenue comes from delivery fees — a strong base to grow from with smarter pricing.

Fix the Fulfillment Engine First

1

Real-Time Inventory Syncing

Integrate automated stock tracking between app and dark stores. Products must show "Out of Stock" instantly — eliminating the 41% cancellation and refund loop.

2

Dynamic Rider Allocation

Deploy surge payouts in under-performing zones. Filter by `Dark_Store_ID` to target worst warehouses and optimize local delivery radius.

Grow Basket Size and Win Back Dormant Customers

AI-Driven Cross-Selling & Bundling

Trigger smart cart recommendations for high-margin Snacks & Personal Care at checkout. Target: lift AOV from **₹180 to ₹220+**.

Targeted Win-Back Campaigns

Re-engage 2K non-repeat customers via push notifications and loyalty coupons tied to an **"on-time delivery guarantee."**

The Road to an 85%+ Success Rate

Post-implementation targets across the three critical levers.

85%+

Order Success Rate

Up from 59% — via real-time inventory syncing

<10%

Late Delivery Rate

Down from 24% — via dynamic rider routing

₹220+

Avg Order Value

Up from ₹180 — via AI cross-selling

Phase 1: Inventory

Real-time sync to cut cancellations

Phase 3: Revenue

Cross-sell & win-back to lift AOV

Phase 2: Delivery

Dynamic routing to reduce late rate

Sequencing matters — fix fulfillment first, then scale revenue.
